electronics and instrumentation volume 11 frequency modulation theory application to microwave links provides information pertinent to the fundamental aspects of microwave beam techniques this book discusses the development in the application of frequency modulation organized into five chapters this volume begins with an overview of the transfer of the radio frequency energy over a given path this text then examines all the general problems of frequency modulation including principle band covered distortion and improvement of the signal to noise ratio other chapters deal with propagation distortion that is apparent in a variable velocity guided transmission channel this book discusses as well the complete problem of telephony and television transmission over radio links and considers the requisite conditions for meeting the international standards the final chapter deals with all the applied techniques concerned with radio link equipment that deals with a large number of general problems this book is a valuable resource for students and engineers

electronic and instrumentation volume 11 frequency modulation theory application to microwave links covers the theoretical principles of microwave beam technique this five chapter text particularly discusses the propagation of the waves used frequency modulation and noise and sundry distortions liable to arise either in the course of propagation in the equipment and in the methods used for the transmission of the information chapter 1 examines the transfer of the radio frequency energy over a given path this chapter describes the properties of propagation of radio waves including

metric decimetric and centimetric through the troposphere chapter 2 concerns all the general problems of frequency modulation while chapter 3 deals with the propagation distortion which is apparent in a variable velocity guided transmission channel and which appears on an echoing path either in free space or over a badly matched feeder chapter 4 discusses the complete problem of telephony and television transmissions over radio links this chapter also considers in detail the requisite conditions for meeting the international standards chapter 5 deals with all the applied techniques with an emphasis on radio link equipment this book will be of great value to students and non specialized and specialized engineers who wish to become familiar with microwave beam technique
